

Hands-on PhD Summer School •17-28 August 2020

Drug delivery using nano and micro technologies are emerging and promising techniques. In this summer school, we will get introductions to various technologies from academic and industrial perspectives, and also try various techniques out in the laboratories.

The aim of the drug delivery summer school is to provide an overview of nano and micro technologies in drug delivery with examples of delivery technologies for peptides/proteins, for poorly soluble drug, vaccines and for cancer drugs, and to give hands-on experience.

Come and join us for two weeks of interesting lectures on drug delivery, and hands-on experience on drug delivery technologies.
